1. (currently amended) An improved golf putter for increasing alignment and feel in the putting stroke comprising:

a club head having a body and a forward ball striking surface;

a club shaft connected to and extending upwards from said body of said club head, said club shaft further including a handle on the upper end thereof;

a weight-receiving pocket formed in an upper surface of said body of said club head;

weight mounting means mounted within said weight-receiving pocket in said body of said club head;

at least one club head weight removably mounted within said weight-receiving pocket of said body of said club head by engagement with said weight mounting means, said at least one club head weight including a generally flat top plate and a weight mounting means engagement portion mounted on the underside of said top plate and depending downwards therefrom, said top plate of said at least one club head weight having approximately the same length and width dimensions as said weight-receiving pocket such that when said at least one club head weight is placed within said weight-receiving pocket, said top plate is generally aligned with the upper surface of said body of said club head to create a generally smooth surface having

1 a good aesthetic appearance which will also generally prevent the incursion of foreign objects
2 into said weight-receiving pocket;

3
4 said at least one club head weight including club head alignment indicia on the top face of said at
5 least one club head weight operative to provide visual alignment cues for ball striking by said
6 forward ball striking surface.

7
8 2. (original) The improved golf putter of claim 1 wherein said club head is
9 generally trapezoidal in shape.

10
11 3. (original) The improved golf putter of claim 2 wherein said weight-receiving
12 pocket is generally rectangular in shape and is generally aligned with the center longitudinal axis of
13 said body of said club head.

14
15 4. (cancelled).

16
17 5. (cancelled).

18
19 6. (original) The improved golf putter of claim 1 wherein said at least one club head
20 weight has a weight between 100 and 600 grams.

21
22 7. (original) The improved golf putter of claim 1 wherein said club head alignment
23 indicia comprises linked arrows generally aligned with the center longitudinal axis of said body of
24 said club head.

25
26 8. (original) The improved golf putter of claim 1 wherein said club head alignment
27 indicia comprises at least two parallel lines generally aligned with the center longitudinal axis of said
28 body of said club head.

1 9. (original) The improved golf putter of claim 1 wherein said club head alignment
2 indicia comprises at least two depending circles generally aligned with the center longitudinal axis
3 of said body of said club head.

4

5 10. (currently amended) An improved golf putter for increasing alignment and feel in
6 the putting stroke comprising:

7

8 a club head having a body and a forward ball striking surface;

9

10 a club shaft connected to and extending upwards from said body of said club head, said club shaft
11 further including a handle on the upper end thereof;

12

13 a ~~generally rectangular~~ weight-receiving pocket formed in an upper surface of said body of said club
14 head;

15

16 weight mounting means mounted within said weight-receiving pocket in said body of said club head;

17

18 at least two club head weights having differing weight, each operative to be removably mounted
19 within said weight-receiving pocket of said body of said club head by engagement with said
20 weight mounting means such that the total weight of said club head is adjustable, said at least
21 two club head weights each including a top plate and a weight mounting means engagement
22 portion mounted on the underside of said top plate and depending downwards therefrom, said
23 top plate of said at least one club head weight having approximately the same length and
24 width dimensions as said weight-receiving pocket such that when said at least one club head
25 weight is placed within said weight-receiving pocket, said top plate is generally aligned with
26 the upper surface of said body of said club head and is operative to generally prevent the
27 incursion of foreign objects into said weight-receiving pocket;

1 each of said at least two club head weight including club head alignment indicia on the top face of
2 said at least one club head weight operative to provide visual alignment cues for ball striking
3 by said forward ball striking surface.

4

5 11. (new) An improved golf putter for increasing alignment and feel in the putting stroke
6 comprising:

7

8 a club head having a body and a forward ball striking surface;

9

10 a club shaft connected to and extending upwards from said body of said club head, said club shaft
11 further including a handle on the upper end thereof;

12

13 a weight-receiving pocket formed in an upper surface of said body of said club head;

14

15 weight mounting means mounted within said weight-receiving pocket in said body of said club head;

16

17 at least one club head weight removably mounted within said weight-receiving pocket of said body
18 of said club head by engagement with said weight mounting means;

19

20 said weight mounting means including at least one weight mounting screw extending upwards from
21 the base of said weight-receiving pocket into the weight-receiving pocket for releasably
22 securing said club head weight within said weight-receiving pocket; and

23

24 said at least one club head weight including club head alignment indicia on the top face of said at
25 least one club head weight operative to provide visual alignment cues for ball striking by said
26 forward ball striking surface.
